

## 01/21/25 team meeting

- Use Case Diagram:
  - Potential primary/target persona. The one who initiates the encounter
    - Patron
  - 1-2 other actors
    - Church systems admin
    - Temple worker or President (view all scheduled appointments for the day)
    - Church systems?
  - Actions (use cases—answer the question “What is the goal” and uses an active verb):
    - Schedule temple appointment
      - Select a temple
    - View scheduled appointments
    - View appointment availability by temple, ordinance, and date time
    - Update temple availability
    - Notify patron of upcoming appointment (email, church system)
    - Notify patron of appointment confirmation (email, church system)
    - Update temple
    - Update scheduled temple appointments
    - Add new temple
    - Cancel scheduled appointments
    - view all scheduled appointments for the day(Temple worker or President )
  - Draw arrows to connect actors to actions
- Flowchart:
  - Pick a use case (action), and expand it out. What will it look like in the future? (need at least 3 user decisions)
  - Schedule temple appointment
    - Log in to church account
    - Navigate to temple scheduler page
    - Choose temple(s)
      - Maybe an option for temple proximity filter, or just nearest
    - Fill out filters
      - Availability (date/time) Yes/No if available
      - Capacity
      - Ordinances
    - Is there a desired available ordinance? Yes/No
    - Select an available ordinance
    - Confirm appointment

- Maybe around this from our User Journey Map:
  - Displaying available ordinances and corresponding times filtering by capacity, date time, ordinances, and temple to help attendees find a time, removing the multi-page process
