

The Problem

Filling positions

- Internal v.s. external
- Qualified
- Extensive applicants - 250 resumes, only 4-6 candidates will get called to interview, and one will get the job

Upskilling

- 1-3 hours to create upskill plan, 70% of an HR representative's time

HR Manager
Henry Smith

CANDID

presented by

Sarah Boyer, Zach Burnside, & Tate Matley

CANDID: An AI-Powered Talent Optimization Platform

- ✿ Intelligent Skill-to-Role Matching
- ✿ Personalized, Actionable Upskilling Plans
- ✿ Transparent, Human-Readable Explanations
- ✿ Built-In Governance & Risk Safeguards

AI Driven Talent Optimization

AI Resume Parsing

AI Upskilling Plans

AI Generated Explanations

ML-Powered Candidate-Job Matching

70%

Skill Matching

Scoring model comparing candidate proficiency levels to job required skill levels, weighted by importance

30%

ML Predictions

Logistic regression model trained on historical outcomes (hired vs. rejected) to predict placement success

Data Privacy & Security

Data Privacy

1. Privacy policy/data sharing agreement
2. Fair Information Practice Principles (FIPPs)

Security

1. Access control - separate roles
2. Secured login system

Bias Mitigation

3 step process

1. ML Model

2. Data Explanation

3. Human Decision

Additional Features

Full CRUD System

Create, edit, and manage employees, applicants, jobs, and skills.

Role-Based Access

Secure login with structured permissions for different roles and teams.

Tableau Analytics Dashboard

Live talent match insights, hiring breakdowns, and performance analytics.

- ✿ Unlocks internal talent before hiring externally
- ✿ One connected platform
- ✿ Upskilling at scale

Finding the right people the right way

Appendix

Q & A Extended

Appendix A: Market Size & Opportunity

🌟 Market

- **\$47B** global HR tech market → projected **\$77B+** in 2030
- **\$1.3T** spent annually on recruiting
- AI in HR: **\$3B → \$15B** by 2030

Sources:

- <https://www.mordorintelligence.com/industry-reports/hr-tech-market>
- <https://www.grandviewresearch.com/industry-analysis/artificial-intelligence-ai-market>
- <https://workinstitute.com/first-year-turnover>
- <https://www.deloitte.com/us/en/what-we-do/capabilities/applied-artificial-intelligence/>

🌟 Problem

- **74%** of hires underperform
- **~1/3** leave within a year
- **58%** struggle to verify skills
- **43%** struggle to find qualified talent
- Upskilling is a top priority, but still ineffective

🌟 Why Now?

- **41%** of companies expect workforce changes due to AI
- Shift toward skills-based hiring over degrees
- Only **37%** of companies feel prepared for AI
- Up to **80%** of jobs impacted by AI tasks

Appendix B: Business Impact of Candid (ROI Breakdown)

Time Savings

- Recruiters spend hours each week reviewing candidates
- Initial screening is manual and repetitive
- Candid reduces screening + matching to seconds

Cost Impact

- Lower cost per hire through automation
- Less manual screening and recruiter workload

Example ROI

100 candidates/week ~20 hours/week
spent reviewing candidates
→ ~1,000 hours/year saved
→ ~\$35K/year saved (@ ~\$35/hr)

Value Created

- Faster hiring
- Better skill-based matches
- Increased HR productivity

Appendix C: Competitive Landscape

Feature	Candid	Workday	Linkedin
AI skill-based matching			
Internal talent mobility			
Explainable AI			
Upskilling integration			

Appendix D: Pricing Model

STARTER

\$5 / employee / month

- AI resume screening
- skill-based matching
- basic candidate ranking
- standard support

GROWTH

\$9 / employee / month

- Internal talent matching
- Explainable AI insights
- Hiring analytics dashboard
- Priority support

ENTERPRISE

Custom (\$50K+ / year)

- Full HR system integrations (ATS/HRIS)
- Upskilling recommendations
- Advanced AI + custom models
- Dedicated support

Why Customers Pay?

- Reduces cost per hire
- Saves hundreds of hours in screening
- Improves hiring quality + retention

Revenue Driver

- Recurring subscription revenue
- Upsell via advanced AI features

Appendix E: Data Requirements

What Data Powers Candid?

- **Resume data** (skills, experience, education)
- **Job descriptions** (role requirements, qualifications)
- **Internal employee data** (skills, performance, growth paths)
- **Historical hiring outcomes** (for model training + improvement)

Appendix F: Implementation & Integration

How Companies Use Candid

1. **Connect HR system** (ATS / HRIS integration)
2. **Import data** (resumes, job descriptions, employee skills)
3. **Run AI matching**
(candidates + internal talent)
4. **HR reviews + make decisions**

Ongoing Model Improvement

- Continuous **data updates** (new hires, skills, outcomes)
- Regular **model retraining**
- Performance **monitoring + optimization**

Scalability & Maintenance

- Cloud-based (no heavy internal infrastructure)
- Minimal maintenance for HR teams
- Ongoing product updates handled by Candid

Appendix G: Hybrid Scoring Architecture

Appendix H: Skill Data Sources – Current and Future

Now - MVP

- Resume Parsing through Claude AI
- Manual data entry for synthetic profiles
- Static candidate profiles

Future - Production

- Resume parsing
- Quarterly performance reviews
- Promotion / Role changes
- Training completion
- Employee Self-assessments

Appendix I: Bias & Fairness Safegaurds

Candid's Process:

- AI recommends based on skills/experience/education only. No race, age, or gender
- System explains why it's ranked that way for transparency
- Human makes final decision
- Outcomes are audited over time to ensure fairness
- Claude AI is checked

Appendix J: AI Explanation

What AI model are we using?

- ☀️ `claude-3-haiku-20240307`
- ☀️ Very fast response times, making it suitable for real-time applications like chatbots and automation.
- ☀️ Low cost compared to larger models, which makes it efficient for high-volume or large-scale use.
- ☀️ Capable of handling long inputs and performing common tasks such as summarization, classification, and data extraction.

Appendix K: AI Explanation

What prompts did we use?

Upskilling:

```
const prompt = `An employee wants to move into a ${jobTitle} role in ${department}. Their top skill gaps are:
${skillsList}.
```

Write a brief, encouraging 2-3 sentence summary of their upskilling journey. Focus on estimated timeline and keep it motivating.

Base the summary only on job-relevant skills, development needs, and the information provided here.

Before finalizing, review the summary for bias or potentially biased language and remove any direct or indirect references, assumptions, stereotypes, or implications related to protected characteristics such as gender, race, ethnicity, age, disability, religion, sexual orientation, or nationality.

Do not infer demographic information or use proxies for protected characteristics.

Keep the tone fair, neutral, supportive, and evidence-based.`;

Appendix K: AI Explanation

Upskilling Full Plan:

const prompt = `An employee wants to move into a \${jobTitle} role in the \${department} department. They have \${gapSkills.length} skill gap(s):
\${skillsList}

Create a comprehensive upskilling plan with this structure:

For each skill gap (in priority order):

1. \${gapSkills[0]?.skill_name || "Skill"} (Gap: \${gapSkills[0]?.gap || "X"})

Explanation: [1-2 sentences on why this skill is critical for the \${jobTitle} role]

Actionable Step: [One specific action they can take right now]

Learning Resources:

- [Specific course or resource with real URL from Coursera, Udemy, LinkedIn Learning, etc.]
- [Hands-on project suggestion]
- [Documentation or book recommendation]

Timeline: [Realistic estimate like "4-6 weeks with 5 hours/week"]

Continue this format for all \${gapSkills.length} skills. Make it encouraging, specific, and actionable.

Base the plan only on job-relevant skills, development needs, and the information provided here.

Before finalizing, review the plan for bias or potentially biased language and remove any direct or indirect references,

assumptions, stereotypes, or implications related to protected characteristics such as gender, race, ethnicity, age, disability, religion, sexual orientation, or nationality.

Do not infer demographic information or use proxies for protected characteristics.

Keep the recommendations fair, neutral, supportive, and evidence-based.`;

Appendix L: AI Explanation

What prompts did we use?

Recommendations - Anthropic AI

Write 2 sentences explaining why they're ranked `#{recommendation.rank}`.

Base the explanation only on job-relevant qualifications, skills, experience, and match data provided here.

Before finalizing, review the explanation for bias or potentially biased language and remove any direct or indirect references, assumptions, or implications related to protected characteristics, including gender, race, ethnicity, age, disability, religion, sexual orientation, nationality, or other non-job-related personal traits.

Do not infer demographic information or use proxies for protected characteristics.

If any phrasing could sound biased, discriminatory, stereotypical, or unfair, rewrite it to be neutral, job-related, and evidence-based.`;

Appendix M: AI Explanation

What prompts did we use?

OpenAI connection

Additional review and check for bias:

content:

"You are an expert editor. Improve clarity, completeness, and professionalism, but do not add new facts. Keep all claims grounded in the provided prompt and draft. Preserve the original format unless the draft is clearly malformed. For every content type, audit the language for fairness and bias, remove biased or potentially biased phrasing, avoid protected-characteristic references or proxies, do not infer demographic information, and keep the output evidence-based and relevant to the task.",

role: "user",

content: `Original task:\n\${originalPrompt}\n\nClaude draft \${contentType}:\n\${draft}\n\nEdit this \${contentType} so it is clearer, more polished, and more comprehensive without inventing facts or changing the meaning.\${biasReviewInstruction}`,
